

How do I Connect a Router or Access Point?

Alex Oquendo - 2016-10-13 - 0 Comments - in Wireless

Never connect a personal router or wireless access point in the residence halls.

You should not build your own wireless network. Adding a router or wireless access point will cause interference for yourself and others in the signal range. If an interfering device is found, the network connection may be shut down. If you are experiencing a weak signal from the DU Wireless network, please submit a case through the Support Center and you will be assisted.
